

VNC Authentication failure on Proxmox reinstall

We had an issue where a new hosted was added but we could never access the VNC's of it. If we did we got an authentication failure. This is a simple fix. Proxmox uses a language locale to pass the authentication along via SSH. "`LC_PVE_TICKET`". However this is disabled in SSHD.

To enable it simply edit the config file at "`/etc/ssh/sshd_config`". Find the line "`#AcceptEnv LANG LC_*`" and uncomment it. Restart SSHD and it should work now.
