How to update/upgrade proxmox?

If you wish to update or upgrade Proxmox, it is probably wise to just look at the Proxmox documentation: https://pve.proxmox.com/wiki/Category:Upgrade. However most of the time, upgrades are fairly simple.

Make sure that the following repository is present:

```
deb http://download.proxmox.com/debian/pve buster pve-no-subscription
```

Make sure that you change *Buster* to the currently running OS, use `lsb_release -a`

```
apt update
apt dist-upgrade
```

Never use `apt upgrade` **, this might break the Proxmox installation and require a complete reinstall!**
