Hashicorp

At ISW, we use Hashicorp Vault as well as Hashicorp Boundary.

Vault

Vault is software to securely store secrets like passwords, tokens, SSH Keys, ... This is useful because secrets are no longer shared on the machines itself, the client makes a request to Vault to retrieve the secret.

- Creating policies
- Logging into a machine using SSH via Vault

Boundary

Boundary is used to enable secure remote access to internal services. Meaning no VPN is required to access Virtual Machines, Routers in our network.
